

TL-E03 – Prioritised User Stories and Acceptance Criteria

Document control

Field	Value
Document ID	TL-E03
Document title	Prioritised User Stories and Acceptance Criteria
Case study	Controlled Mortgage-Forbearance Case Study
Author	Tony Anuge
Version	0.2
Status	Draft
Created date	28 July 2026
Last updated	Sep 17, 2026
Reviewer	Not yet assigned

Purpose

This document records the initial Jira user stories and acceptance criteria created for the controlled mortgage-forbearance case study. It provides portfolio evidence of translating business and functional requirements into prioritised, testable delivery items.

Story-writing approach

Each user story was written from the perspective of a defined user or system role. The stories describe the capability needed, the reason it is needed and the conditions that must be satisfied for the story to be considered complete.

Element	Approach used
User role	Identifies who needs the capability

Need	States what the user or system must be able to do
Business value	Explains why the capability matters
Acceptance criteria	Defines observable and testable conditions
Priority	Indicates relative business or control importance
Jira status	Tracks the item through the delivery workflow

Prioritised user stories

Jira item	User story	Primary role	Priority
SCRUM-1	Capture a controlled mortgage-forbearance case	Mortgage case operator	High
SCRUM-2	Validate mandatory case information	Mortgage case operator	High
SCRUM-3	Evaluate the case against policy criteria	Mortgage case operator	High
SCRUM-4	Submit the proposed outcome for independent approval	Mortgage case operator	High
SCRUM-5	Review and decide a submitted case	Independent approver	High

SCRUM-6	Execute only the approved decision version	Execution-system integration	Highest
SCRUM-7	Monitor case progress and control exceptions	Mortgage operations manager	Medium
SCRUM-8	Reconstruct the complete decision history	Audit, compliance or quality-assurance user	High

Acceptance-criteria review

The acceptance criteria were reviewed for clarity, testability, missing states and control coverage. Particular attention was given to mandatory information, policy-version recording, separation of duties, approval authority, decision-version matching, failed execution and audit-history protection.

Checklist:

- Each criterion describes an observable result.
- Criteria avoid vague terms such as “user-friendly”, “appropriate” or “quick” without a defined measure.
- Positive and blocked outcomes are included where relevant.
- Required roles and permissions are identified.
- Status changes are specified where they affect the workflow.
- Evidence, user identity and timestamps are captured for material actions.
- Exception and failure conditions are covered.
- Criteria do not prescribe unnecessary technical design.

Traceability

Jira story	Related requirements
SCRUM-1 – Capture a controlled mortgage-forbearance case	TL-BR-001, TL-BR-004, TL-FR-001, TL-FR-002, TL-FR-013

SCRUM-2 – Validate mandatory case information	TL-BR-001, TL-BR-005, TL-FR-003, TL-RULE-001, TL-EX-001
SCRUM-3 – Evaluate the case against policy criteria	TL-BR-001, TL-BR-002, TL-FR-004, TL-FR-005, TL-FR-006, TL-RULE-002, TL-RULE-003
SCRUM-4 – Submit the proposed outcome for independent approval	TL-BR-003, TL-FR-007, TL-FR-008, TL-RULE-004, TL-RULE-005
SCRUM-5 – Review and decide a submitted case	TL-BR-003, TL-FR-009, TL-FR-010, TL-RULE-007, TL-EX-004
SCRUM-6 – Execute only the approved decision version	TL-BR-004, TL-FR-011, TL-FR-012, TL-RULE-006, TL-RULE-008, TL-RULE-009, TL-EX-005, TL-EX-006
SCRUM-7 – Monitor case progress and control exceptions	TL-BR-005, TL-BR-006, TL-FR-015
SCRUM-8 – Reconstruct the complete decision history	TL-BR-002, TL-BR-004, TL-FR-013, TL-FR-014, TL-RULE-010, TL-NFR-005, TL-NFR-006

Review findings

The review confirmed that the initial story set covers the main workflow from controlled case creation through assessment, approval, execution, oversight and later evidence review. The strongest control emphasis is on preventing incomplete cases from progressing, enforcing independent approval and ensuring that only the approved decision version can execute.

The Jira backlog has been reconciled against this catalogue and confirms the eight delivery items as SCRUM-1 through SCRUM-8.

The stories remain draft because approval thresholds, mandatory data fields, material-change rules, service levels and final reporting needs have not yet been validated with real stakeholders.

Open issues

ID	Open issue	Impact	Status
----	------------	--------	--------

OI-001	Jira item IDs confirmed as SCRUM-1 through SCRUM-8.	Traceability	Closed
OI-002	Confirm mandatory intake fields.	SCRUM-1 and SCRUM-2	Open
OI-003	Confirm approval authorities and thresholds.	SCRUM-4 and SCRUM-5	Open
OI-004	Confirm what constitutes a material case change.	SCRUM-4, SCRUM-5 and SCRUM-6	Open
OI-005	Confirm measurable service-level targets.	SCRUM-7	Open
OI-006	Confirm audit-retention and access requirements.	SCRUM-8	Open

Change history

Version	Date	Author	Change description
0.2	Sep 17, 2026	Tony Anuge	Reconciled Jira item IDs and requirements traceability against TL-E02 and the current

			test-design workbook.
