Field	Value
Document ID	TL-E02
Document title	Requirements, Rules and NFR Catalogue
Case study	Controlled Mortgage-Forbearance Case Study
Author	Tony Anuge
Version	0.2
Status	Draft
Created date	23 July 2026
Last updated	Sep 17, 2026
Reviewer	Not yet assigned

Purpose

This document records the initial business requirements, functional requirements, business rules, exception rules and non-functional requirements for the controlled mortgage-forbearance case study. The content is based on the business problem and scope defined in TL-E01 and remains subject to stakeholder validation.

This catalogue represents design-level requirements for the synthetic case study and has not been validated through live stakeholder engagement, production-system access or live customer data.

Requirements conventions

Requirements are uniquely identified so they can be reviewed, traced, prioritised, tested and managed through change control.

Prefix	Meaning
TL-BR	Business requirement
TL-FR	Functional requirement
TL-RULE	Business or decision rule
TL-EX	Exception rule
TL-NFR	Non-functional requirement

Business requirements

ID	Business requirement	Priority	Status
TL-BR-001	The organisation shall apply a consistent and controlled process to mortgage-forbearance assessments.	Must	Draft
TL-BR-002	The organisation shall demonstrate which customer information, policy criteria and approvals supported each decision.	Must	Draft

TL-BR-003	The organisation shall ensure that only appropriately authorised users approve controlled decisions.	Must	Draft
TL-BR-004	The organisation shall preserve a traceable record of the decision from intake through implementation.	Must	Draft
TL-BR-005	The organisation shall reduce avoidable rework caused by missing information, incomplete checks or absent approval evidence.	Should	Draft
TL-BR-006	The organisation shall provide reliable management information on case volumes, outcomes, exceptions and delays.	Should	Draft

Functional requirements

ID	Functional requirement	Priority	Status
TL-FR-001	The solution shall allow an authorised operator to create a mortgage-forbearance case.	Must	Draft
TL-FR-002	The solution shall capture mandatory customer, account and assessment information.	Must	Draft
TL-FR-003	The solution shall identify missing mandatory information before assessment proceeds.	Must	Draft
TL-FR-004	The solution shall evaluate the case against the applicable policy criteria.	Must	Draft

TL-FR-005	The solution shall record the policy version and rule results used during assessment.	Must	Draft
TL-FR-006	The solution shall record the proposed outcome and supporting rationale.	Must	Draft
TL-FR-007	The solution shall route cases requiring approval to an authorised approver.	Must	Draft
TL-FR-008	The solution shall prevent the case originator from approving their own case where separation of duties applies.	Must	Draft
TL-FR-009	The solution shall allow an approver to approve, reject or return a case for further information.	Must	Draft

TL-FR-010	The solution shall record the final approved decision and its exact version.	Must	Draft
TL-FR-011	The solution shall prevent execution of a decision that does not match the approved version.	Must	Draft
TL-FR-012	The solution shall record the implementation or execution outcome.	Must	Draft
TL-FR-013	The solution shall retain an audit trail of material actions and status changes.	Must	Draft
TL-FR-014	The solution shall allow authorised users to review the full decision history.	Should	Draft

TL-FR-015	The solution shall provide management reporting on case status, outcomes, exceptions and processing time.	Should	Draft
-----------	---	--------	-------

Business rules

ID	Rule
TL-RULE-001	A case must not proceed to assessment until all mandatory information is present or an authorised exception has been recorded.
TL-RULE-002	The policy version used for assessment must be recorded with the decision.
TL-RULE-003	Each decision must include a recorded rationale.
TL-RULE-004	Cases meeting defined escalation criteria must be referred to an authorised approver.
TL-RULE-005	A user must not approve a case they originated where separation of duties is required.
TL-RULE-006	The approved decision must be the same version presented for execution.
TL-RULE-007	An approval must not remain valid after a material case change.

TL-RULE-008	A final decision must not be altered without creating a new controlled version.
TL-RULE-009	The implementation result must be linked to the approved decision record.
TL-RULE-010	All material case actions must record the user, timestamp and action performed.

Exception rules

ID	Exception rule
TL-EX-001	A case with missing mandatory information may proceed only where the relevant policy permits it and an authorised user records the reason.
TL-EX-002	A policy exception must include a reason, evidence and approval by a user with the required authority.
TL-EX-003	A returned case must re-enter the controlled process at the appropriate earlier stage.
TL-EX-004	A material change after approval must invalidate the earlier approval and require reassessment.
TL-EX-005	A failed execution must be recorded and must not be treated as a completed customer outcome.

TL-EX-006	An expired or previously used execution authorisation must not permit execution.
-----------	--

Non-functional requirements

ID	Non-functional requirement	Category
TL-NFR-001	Access shall be restricted according to defined user roles and permissions.	Security
TL-NFR-002	Customer information shall be protected in transit and at rest.	Security
TL-NFR-003	Tenant or business-unit data shall remain isolated from unauthorised users.	Security
TL-NFR-004	Decision evidence and audit records shall be protected against unauthorised alteration.	Integrity
TL-NFR-005	Material actions shall be timestamped and attributable to a specific user or system.	Auditability
TL-NFR-006	The solution shall preserve sufficient evidence to reconstruct the decision path.	Auditability

TL-NFR-007	The solution shall display clear validation and error messages.	Usability
TL-NFR-008	Core case pages shall be usable on standard desktop screen sizes.	Usability
TL-NFR-009	Authorised case information should load within an agreed operational response time under normal conditions.	Performance
TL-NFR-010	The solution shall retain records according to the approved retention schedule.	Records management
TL-NFR-011	The solution shall provide appropriate logging and monitoring for operational support.	Supportability
TL-NFR-012	Policy and rule changes shall be version controlled.	Maintainability

Dependencies

This analysis depends on access to current policy documents, approval-authority rules, process owners, representative users, system information, data definitions, baseline performance data and relevant compliance or legal interpretation.

Open issues

ID	Open issue	Owner	Status
----	------------	-------	--------

OI-001	Confirm the complete set of mandatory intake information.	Business owner	Open
OI-002	Confirm the approval thresholds and authority levels.	Policy owner	Open
OI-003	Confirm which case changes are considered material.	Risk and compliance	Open
OI-004	Confirm the authoritative source for each required data item.	Data and technology	Open
OI-005	Confirm the required retention period for decision evidence.	Legal and compliance	Open
